

## Would a different rate plan have saved you money?

### Compare rate plans and see if you can save

Your rate plan options allow you to pick the plan that best fits your needs. For many, that comes down to a simple question: Which plan would have saved you the most money?

There's an easy way for eligible customers to find out what they would have saved on the available plans. Simply log in to your [aps.com](https://www.aps.com) account and visit our free online [plan comparison tool](#) or look for the blue box on pages 1 and 3 that says "Your Monthly Plan Comparison."

### How the plan comparison tool works

The tool looks back at up to 12 months of your energy use. It uses this information to estimate what you might have paid over that same period on different rate plans and tells you which plan could have saved you the most money. The tool's calculations and estimated savings do not account for things such as bill adjustments, mid-cycle updates, or one-time charges/credits and, therefore, may not match your historic bills. The tool cannot guarantee future savings because it does not account for adjustments to rates/taxes, changes in weather, or changes you make to how you use energy. In fact, since your energy use changes over time, the plan that could save you the most money can change from month to month.

### Check back often

The way you use energy can change over time, so the plan that can save you the most can also change. Check your monthly bill or use the [comparison tool](#) regularly to see if the lowest-cost plan changes. And, you can switch plans at any time and as often as you'd like.
