

## Video: Vampire Appliances

VISUAL	AUDIO
2.1 Mom to camera.	We may be wasting energy without even knowing it.
2.2 Dad to camera – different area, separate from mom.	Some appliances in our home use energy even when they're off.
2.3 Shots of standby red light dots. We see a dark shadow walking by.	By being plugged in, they go on standby. Our toaster, iron, hair dryer, coffee maker and even our cell phone charger can be sucking up energy that can otherwise be saved.
2.4+ Shots of appliances that fit. We continue to see a dark shadow lurking in the scene.	These appliances account for 10% of average energy use so keep them unplugged when you're not using them.
2.5 Dad to camera. Dark shadow in the background	We call these vampire appliances. And, no one likes vampires
2.6 Son scares dad while dressed as a vampire. Cute, funny moment.	Muahahahaha (sound). Well, some vampires are ok.
