Current WRAP participants project a changing resource mix within the next five years, according to the proposed resource portfolios analyzed for the first non-binding phase of the WRAP. The modeling and its resulting set of metrics, including increasing required Planning Reserve Margins, underscore the importance of implementing the WRAP and provide additional context to the conversation about the tightening supply in the region.

First Full Set of Non-Binding Data Highlights Importance of WRAP

Highlights from the Pacific Northwest Utilities Conference Committee (PNUCC) 2022 Northwest Regional Forecast:

- Transition to clean energy +
- ⬇️ Growing customer demand for electricity =
- 📉 Anticipated peak capacity shortfalls &
- 🏗️ Need to acquire additional resources

“There is universal recognition that the power industry must work together to ensure an adequate, reliable power supply as the industry’s transition to a carbon-free future unfolds,” the report said, specifically citing our Western Resource Adequacy Program (WRAP) as an example of the industry coming together to address the issue.
