

Changing the Way the World Solves Problems | ASU Knowledge Enterprise - Video Script

At Arizona State University's Knowledge Enterprise, we venture beyond traditional approaches to tackle complex issues. We are dedicated to changing the way the world solves problems to support thriving people, a thriving planet and a thriving society.

We are innovating health solutions for lifelong well-being — from diagnostics and treatments to health care delivery and behavior change.

Our entrepreneurship programs helped bring Navi Nursing, a nursing-on-demand startup, to reality — filling a critical gap in care after hospitalization.

Arizona State University researchers are developing innovative treatments for cancer, from nanorobots that cut off a tumor's blood supply to viruses that target cancer cells.

We are designing a sustainable future in which all life on Earth can thrive.

Our Julie Ann Wrigley Global Futures Laboratory is the world's first institution of its kind, specifically designed to address global challenges and care for our planet as a holistic system.

The laboratory is home to a new UNESCO Flagship Hub for sustainability sciences. The hub brings humanities and social science expertise to help achieve sustainability goals.

We are preparing our communities to thrive and our nation to lead by advancing critical technologies and discovery.

Arizona State University is collaborating with industry and government to strengthen America's capacity for semiconductor manufacturing and microelectronics innovation. Together, we are pioneering new technologies and platforms that power a smarter, more secure, and more competitive future.

Quantum information science will have a profound impact on the future of humanity. With the Quantum Collaborative, Arizona State University brings together global leaders to advance the technologies and the workforce that will expand the boundaries of what's possible.

We are part of a team that is building a commercial space station, led by Blue Origin and Sierra Space. Arizona State University leads a global consortium of universities providing research and outreach services to empower educators, scientists, businesses, and nations in their off-world endeavors.

For thriving people, a thriving planet, and a thriving society...

At Arizona State University's Knowledge Enterprise, we are changing the way the world solves problems.
